Supervision & Consultancy

BerComS' supervisors and engineers do have extended experience in a wide variety of industries On- and Off-shore including Construction projects, Energy industry related projects and pipeline pigging projects.

Pipeline pigging operations

- Determine most suitable cleaning & inspection program
- Recommendations in the tender phase
- Recommend/select inspection contractor
- Planning the inspection program
- In cooperation with the client advising in the tender phase their needs to achieve the required level of Integrity
- Which technique or types of tools are required and what is available on the market.

Pipeline rehabilitation: advice and consultancy to obtain the best practical solutions to extend the life of pipelines and improve performance.

Shut-down of Refineries and process plants: advising operators during preoperational phase to optimize and reduce down time with regard to furnace pigging, reactor cool-downs, system purging with making the best use of nitrogen.

In addition BerComS can assist with the preparation of operational procedures and safety related issues.
